

EXECUTIVE BRIEF

APTIVRA

From AI Learning to Measurable Workplace Capability

AI access and AI learning are expanding, but the translation into measurable workplace capability remains insufficiently understood and demonstrated.

WHY NOW?

39%

of workers' core skills are expected to change by 2030

63%

of employers cite the skills gap as the #1 barrier to transformation

230M

African jobs are projected to require AI-related skills by 2030

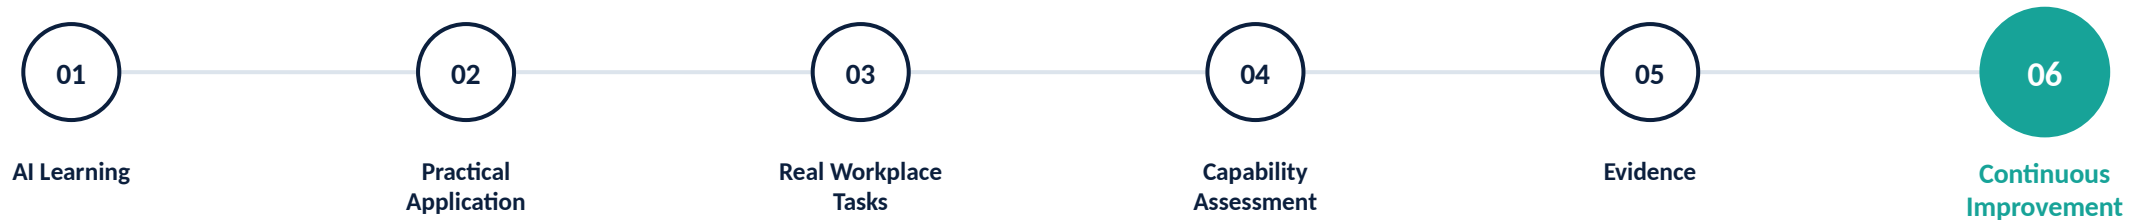

THE QUESTION

If workers learn to use AI, does their work actually improve?

THE APTIVRA APPROACH

From AI Learning to Demonstrated Capability

A single working model connects AI learning to proof of workplace performance:

WHAT WE MEASURE

The objective: move beyond course completion to measuring what people can actually do with AI at work.

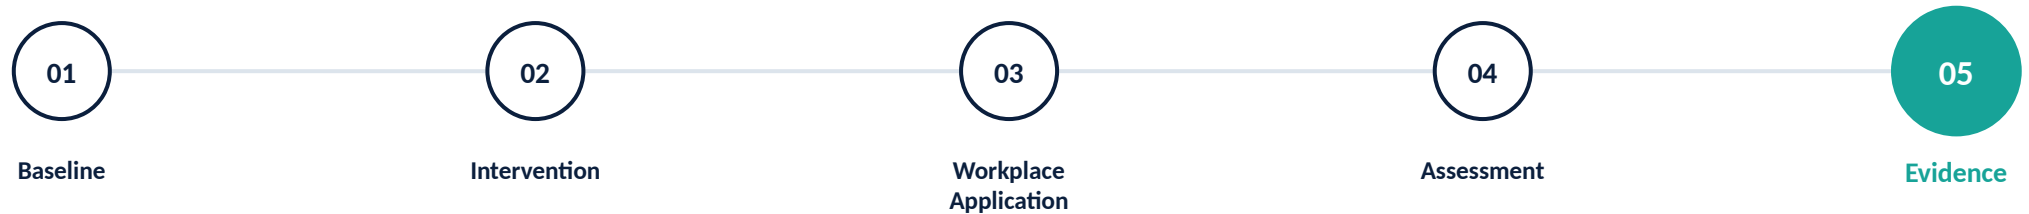

THE MOROCCO PILOT

Morocco as the Proving Ground

WHO

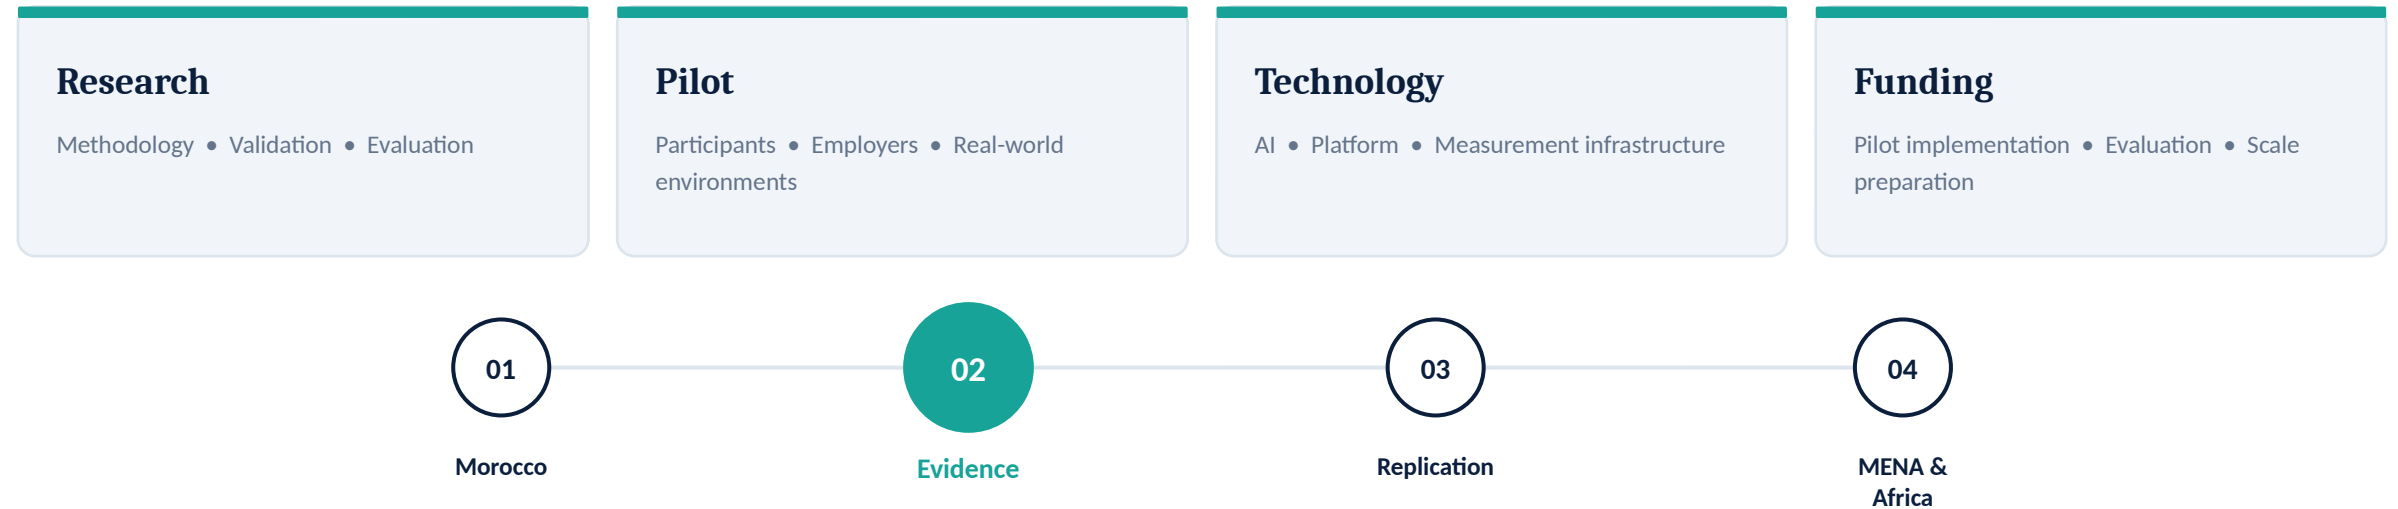

WHAT THE PILOT AIMS TO PRODUCE

To generate evidence on whether structured AI application can improve measurable workplace capability.

PARTNERSHIP OPPORTUNITY

We Are Looking for Strategic Partners
