

MASTER PILOT DECK

From AI Learning to Measurable Workplace Capability

MOROCCO

AFRICA

01 — THE CHALLENGE

AI Access Is Expanding. Workplace Capability Is Not Keeping Pace.

Generative AI is transforming how people work, learn and create value. Yet access to AI and AI learning do not automatically translate into measurable workplace capability.

For Africa, this challenge is particularly important. AI adoption is advancing, but gaps in digital infrastructure, skills and organizational capability can limit the productivity gains that AI can deliver.

*The question is no longer just: can people access and learn AI?
It is: can they use AI effectively, responsibly and productively in real work?*

39%

of workers' core skills are expected to change by 2030

63%

of employers cite the skills gap as the primary barrier to workforce transformation

230M

jobs in Africa are projected to require digital or AI-related skills by 2030

02 — THE APTIVRA THESIS

Proving That AI Use Translates Into Real Performance

“The next AI skills challenge is not simply access to AI — it is proving that people can use AI to perform better at work.”

APTIVRA is built around the transition from:

03 — THE SOLUTION

An AI-Native Workforce Capability Platform

APTIVRA turns AI learning into measurable workplace performance through a continuous capability loop:

- 1 AI-Assisted Learning & Practical Skill Development
- 2 Real-World Workplace Tasks & Scenarios
- 3 Human-AI Collaboration
- 4 Capability Assessment & Evidence
- 5 Continuous Feedback & Improvement
- 6 Responsible AI Use

04 — MEASUREMENT FRAMEWORK

From Course Completion to Demonstrated Capability

APTIVRA is designed to test and measure the transition from learning to capability across dimensions such as:

APTIVRA CAPABILITY SCORE — a composite index across the seven dimensions above, producing structured Capability Evidence for each participant.

The objective is to move beyond measuring course completion toward measuring what people can actually do with AI in a work context.

05 — INITIAL PILOT · MOROCCO

Morocco as the Proving Ground

Morocco is proposed as the initial environment for developing and validating the APTIVRA model. The pilot would bring together relevant professionals and learners, employers, academic and research partners, and technology stakeholders to test the model in real-world contexts.

Pilot objective: generate credible evidence, refine the methodology, and establish a foundation for scalable deployment.

1 **Learners & Professionals**

2 **Employers**

3 **Academic & Research Partners**

4 **Technology Stakeholders**

06 — THE PILOT

An Evidence-Generating Workflow

07 — SCALE PATHWAY

Designed for Scale from the Outset

The long-term opportunity is to develop an adaptable approach to workforce capability for economies undergoing rapid AI-driven transformation.

08 — DIFFERENTIATION

Learning Is Not the Final Outcome. Capability Is.

APTIVRA focuses on the measurable transition:

This creates a potential evidence layer connecting:

09 — STRATEGIC COLLABORATION

What We Are Looking For

Research Partner

- Validation
- Evaluation methodology
- Research design

Technology Partner

- AI infrastructure
- Platform development
- Technical expertise

Employer Partner

- Workplace tasks
- Pilot participants
- Performance data

Funding Partner

- Pilot financing
- Evaluation
- Scale preparation

10 — WORKING LANGUAGES

Communicating With Precision, In the Right Language

APTIVRA engages internationally through a deliberate, multilingual protocol:

EN

Written Communication

Proposals, reports, decks and formal correspondence are prepared in English, for full accessibility to international partners and institutions.

FR / AR

Live Conversations

Calls, meetings and live discussions are conducted in French or Arabic, ensuring precision, nuance and clarity in real time.

For meetings with English-speaking counterparts, interpretation support can be arranged upon request — preserving the same precision in every conversation.
